I've set up and started a database that can be viewed in the web interface at (I have a user with access to the database). I've created a Google App Engine site which I can visit at: I can successfully deploy a Flask app to this site which shows that it can connect to the SQL DB, however, the moment I make any change to the code and re-deploy, the site becomes completely unresponsive, and the following error is displayed in the console: Traceback (most recent call last): File "C:\Users\twdotd\PycharmProjects\myapp\app.py", line 28, in from flask import Flask File "C:\Python27\lib\site-packages\flask__init__.py", line 19, in from werkzeug.exceptions import abort ImportError: cannot import name 'abort' I believe this is being caused by my app not being able to connect to the database. I then 82157476af
